steam sterilisation process. Professional clothing is to be collected in sufficiently resistant and thick containers/sacks and reprocessed with

thermal or chemical-thermal disinfection procedures

firms. Household-like waste is collected in waste bags and sorted and disposed of in accordance with the local guidelines.

Pointed, sharp, fragile objects, body parts (e.g. teeth, tissue), waste contaminated with blood, secretions (e.g. saliva ejectors, dental rolls, swabs, etc.), and waste contaminated with pathogens of notifiable

diseases must be collected immediately at their point of use in non-penetrable, tear-resistant, moisture-proof and leak-tight containers. The contents must not be transferred to other containers or sorted and

must be disposed of by incineration in securely sealed containers. Lead foil, old films, fixing baths, developer, residues containing mercury, old medications and batteries are disposed of by specialist disposal
